

**APPENDIX A**  
**“Clean” Version of Each Paragraph/Section/Claim**  
**37 CFR 1.121(b)(1)(ii) AND (c)(1)(i)**

**CLAIMS (with indication of amended or new):**

---

Claim <sup>1</sup>~~2~~ (Amended)      A portable information radio terminal device comprising:

<sup>C1</sup> a device body;

a printed board provided in said device body;

an electronic part provided on said printed board; and

<sup>D1</sup> an elastic member supporting said printed board within said device body;

wherein said device body includes a first and second casing to be assembled with each other, and said elastic member is disposed between said printed board and said first casing and between said printed board and said second casing.

Claim <sup>2</sup>~~2~~ (Twice Amended)      A method of manufacturing a portable information radio terminal device for assembling a first casing and a second casing, and housing a printed board between said first and second casings, comprising:

arranging said printed board on one of said first and second casings with an elastic member positioned between said printed board and said one of said first and second casings to support said printed board; and

assembling the other of said first and second casings to said one of said first and second casings while interpositioning said elastic member between said other of said first and second casings and said printed board.

---

---

Claim ~~11~~<sup>4</sup>. (Amended) A portable information radio terminal device comprising:

a housing;

a printed circuit board; and

a cushion in contact with both the housing and the printed circuit board so as to support the printed circuit board within the housing.

C<sup>2</sup> Claim ~~12~~<sup>5</sup>. (Amended) The device as recited in claim ~~11~~<sup>4</sup>, wherein:  
the housing comprises a first casing and a second casing detachable from the first casing; and

at least a portion of the cushion is in contact with the first casing and at least a portion of the cushion is in contact with the second casing.

Claim ~~13~~<sup>6</sup>. (Amended) The device as recited in claim ~~11~~<sup>4</sup>, wherein  
the housing comprises a first and a second casing;  
the cushion is in contact with the first casing and the printed circuit board; and  
the portable device further comprises a second cushion distinct from the first cushion, the second cushion being in contact with the second casing and the printed circuit board.

Claim ~~14~~<sup>7</sup>. (Amended) The device as recited in claim ~~11~~<sup>4</sup>, wherein the cushion is disposed at a part of the housing which is proximate to the center of gravity of the portable device.

---

**APPENDIX B**  
**Version With Markings To Show Changes Made**  
**37 CFR 1.121(b)(iii) AND (c)(ii)**

**CLAIMS (with indication of amended or new):**

Claim 3. (Amended)      A portable information radio terminal device [as set forth in claim 2,] comprising:

a device body;

a printed board provided in said device body;

an electronic part provided on said printed board; and

an elastic member supporting said printed board within said device body;

wherein said device body includes a first and second casing to be assembled with each other, and said elastic member is disposed between said printed board and said first casing and between said printed board and said second casing.

Claim 9. (Twice Amended)      A method of manufacturing a portable information radio terminal device for assembling a first casing and a second casing, and housing a printed board between said first and second casings, comprising:

[a step of] arranging said printed board on one of said first and second casings with an elastic member positioned between said printed board and said one of said first and second casings to support said printed board; and

[a step of] assembling the other of said first and second casings to said one of said first and second casings while interpositioning said elastic member between said other of said first and second casings and said printed board.

Claim 11. (Amended) A portable information radio terminal device comprising:  
a housing;  
[an electronic part] a printed circuit board; and  
a cushion in contact with both the housing and the [electronic part] printed circuit board so as to support the [electronic part] printed circuit board within the housing.

Claim 12. (Amended) The [portable] device as recited in claim 11, wherein:  
the housing comprises a first casing and a second casing detachable from the first casing; and  
at least a portion of the cushion is in contact with the first casing and at least a portion of the cushion is in contact with the second casing.

Claim 13. (Amended) The [portable] device as recited in claim 11, wherein  
the housing comprises a first and a second casing;  
the cushion is in contact with the first casing and the [electronic part] printed circuit board; and  
the portable device further comprises a second cushion distinct from the first cushion, the second cushion being in contact with the second casing and the [electronic part] printed circuit board.

Claim 14. (Amended) The [portable] device as recited in claim 11, wherein  
the cushion is disposed at a part of the housing which is proximate to the center of gravity of the portable device.
